About Us

imagination. innovation. involvement. impact.

Johnson, Mirmiran & Thompson is an employee owned, multi-disciplined architectural/engineering firm that offers a full array of planning, design, and construction phase consulting services for infrastructure projects for over 40 years throughout the United States. Our client base consists of federal, state, and local government agencies as well as many private institutions, commercial, and industrial clients. We provide complete solutions for the following Markets:

- Transportation
- Buildings & Facilities
- Water, Wastewater & Utilities
- Federal Programs
- Information Technology

JMT's staff consists of engineers, architects, planners, environmental specialists, and construction professionals who are involved in every phase of project development to ensure the success of every project. We provide a wide variety of services which encompass:

- Surveys & Mapping
- Planning
- Design
- Program & Construction Management
- Environmental & Sustainable Solutions
- Innovative Project Delivery

JMT's approach to projects is to use our **imagination** to envision all the possibilities, use **innovation** in all the solutions developed, attain **involvement** of all stakeholders, and produce projects that have immediate **impact**, making a definitive difference to all users.

Transportation

Market Areas

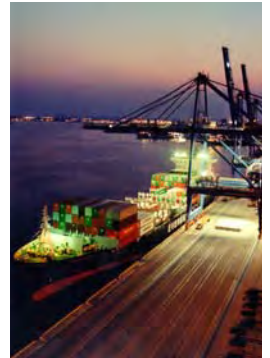

Highways & Bridges

Aviation

Rail & Transit

Marine

Pedestrians / Bicyclists

JMT is a national leader in delivering transportation infrastructure improvements for all modes. Our trademark is the development of innovative and sustainable solutions that increase safety, mobility, and efficiency of operation for all stakeholders. We have expertise in planning, design, and construction phase services for all transportation modes, and we work with federal, state, and local agencies on a wide range and scale of projects.

Highways & Bridges

JMT has completed thousands of highway and bridge projects throughout the United States. Highway projects have ranged in complexity from local intersection improvements to streetscapes in urban environments to the most complex interstate and highway projects.

Our bridge projects include services for bridge inspection and remedial design, rehabilitation of existing bridges and design of new steel, concrete and precast bridges, culverts and retaining walls.

We are leaders in context sensitive design and always assemble a multi-disciplined team of engineers, landscape architects, and environmental specialists to ensure that the highway and bridge improvements blend into the community and environmental contexts while at the same time satisfying transportation needs.

Projects are delivered using traditional design-bid-build, design-build, best value, and Public Private Partnerships.

Aviation

With airport campuses often resembling small cities, JMT has the experience to support the varied and numerous needs of an airport's infrastructure involving landside, terminal, and airside improvements.

We can assist with finding funding sources and creating budgets and schedules for improvement and expansion projects. From the planners and design engineers developing the plans and documents, to our construction managers and inspectors verifying for the owner that everything is being built according to specifications, JMT has the knowledge to successfully provide services to any airport campus.

Rail & Transit

JMT provides complete transportation solutions for the planning, design, and construction management of transit and rail facilities. Our multi-disciplined transit staff consists of architects, planners, engineers, environmental specialists, and construction professionals whom are involved in every stage of project development for transit, rail, bus, and paratransit facilities.

Marine

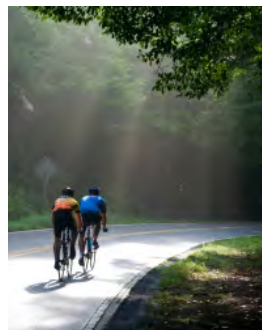

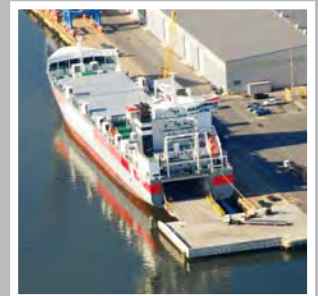

Marine and port facilities are part of a complex system of interconnected railroads and highways designed to facilitate the movement of goods throughout the transportation network and require expertise in a broad range of engineering and related disciplines.

At JMT we support agencies from ship to shore with architectural and engineering expertise regarding wharfs, piers, bulkheads, warehouses, buildings, earthwork, foundations, paving, utilities, trackwork, and landscaping.

Pedestrians / Bicyclists

Pedestrian and bicycle facilities are vital elements to the overall success of any transportation system and require careful consideration during the planning and design process. Our team of planners, engineers, and landscape architects works closely with all project stakeholders to provide our clients with innovative and practical solutions to pedestrian and bicycle design issues.

We develop feasibility studies, master site plans, site designs, trail and greenway projects, and provide complete construction management and inspection services for pedestrian and bicycle facilities.

Healthcare

Sustainable Facilities / LEED®

JMT's multi-disciplined team of architects, engineers, and planners work collaboratively to deliver successful building and facility projects. Our LEED® Accredited Professionals provide green engineering and operations solutions for modern facilities including design and construction management for new buildings, as well as substantial expertise in the renovation and rehabilitation of existing buildings.

JMT provides the complete breadth of engineering services required for many facility projects, such as analysis and design of mechanical, building automation, plumbing and electrical systems, landscape architecture, site design, storm water management, and utilities systems including water, sewage, gas, electric, and communications.

At JMT, we not only have the capability to fast track projects, we also offer a number of unique services including security assessments and emergency response planning, building code evaluations, commissioning, life cycle integration, and peer review.

This expertise provides the client with a one-stop shop for any facility project, whether we are serving as program manager, project manager, design support, or construction manager.

Water, Wastewater & Utilities

Clean water and sanitation facilities are critical to all of us. Our engineers, licensed plant operators, and construction professionals solve complex problems for water and sewer systems and facilities providing a brighter future for our nation.

Within every community, water and sanitation facilities require development, enhancement, and continued operation and maintenance support to ensure their vitality. JMT helps public agencies and private entities to develop, maintain, and extend water and sewer systems and facilities.

We solve the complex problems associated with regulatory and consent decree enforced designs and upgrades, providing efficient and cost-effective services within the ever-tightening design and construction schedules. Our environmental staff remains up to date on the latest industry regulations and technologies.

JMT's expertise includes:

- Water Distribution
- Wastewater Conveyance & Collection
- Analysis, Modeling, & Design
- Treatment Process Engineering
- Instrumentation & Controls
- Biological & Enhanced Nutrient Removal
- Structural Engineering
- Geotechnical Engineering
- Mechanical Engineering
- Electrical Engineering
- Utility Identification, Locating, & Design

Construction Management /
Inspection

The US federal government comprises the largest market sector for architectural and engineering services in the world. Comprised of the Department of Defense and many civilian agencies, there is a broad need for innovative and varied technical expertise to assist governmental agencies with their missions.

JMT is uniquely positioned to provide a full range of professional A/E services to the federal government. We have extensive experience completing federal projects and a multi-disciplined staff that can provide 'one stop shopping' as we have all the necessary services within one firm. We provide a complete array of integrated engineering, program and construction management services to our federal clients throughout the US, meeting their needs in a cost and time efficient manner.

Two additional contracting mechanisms include:

General Services Administration (GSA) Schedule Contracts under which we can provide a wide range of services to all federal agencies including:

- Project/program management
- Construction management & inspection
- Professional development training
- Planning
- Environmental compliance and permit review
- Information Technology
- Geographic Information Systems

System Engineering & Analysis/Advance Technology Support Contract (SeaPort e-Rolling Admission), under which we can provide services to the United States Department of the Navy.

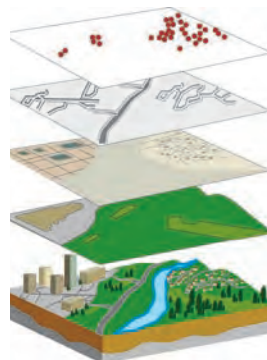

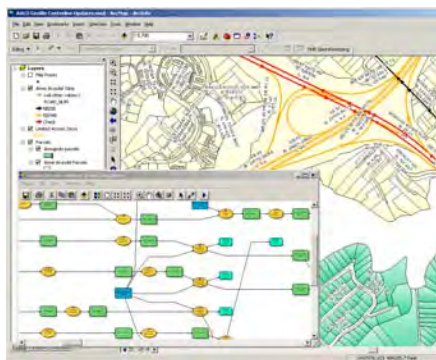

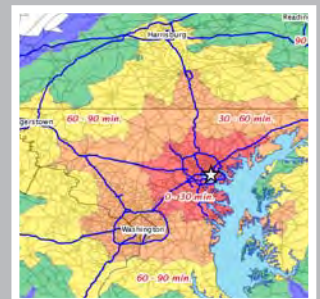

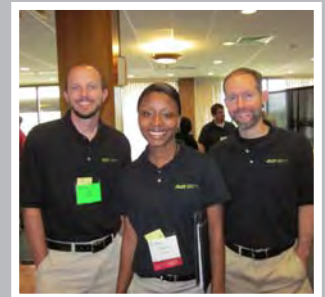

Information Technology

JMT Technology Group is a leading geospatial solutions provider for technology planning, design and implementation services to government agencies and private interests. With over 20 years of experience providing geospatial consulting services, JMT develops and implements innovative solutions to business problems through the application of geospatial technology.

Our information technology and geospatial services team delivers complete and comprehensive solutions that support the enterprise, where quick and efficient access to current information is a requirement not a luxury. JMT's implementation approach maximizes return on investment while streamlining business processes across the enterprise.

With unparalleled depth and breadth of resources and a proven track record, JMT provides the right skills and solutions for our customers in the office, in the field and on the go.

At JMT, customer service is our number one priority. Working closely with our customers, JMT commits to delivering quality products and services on time and within budget.

Geographic Information Systems

Enterprise Content Management

Software Development

Our Services

Surveys & Mapping

JMT provides complete survey and mapping services which serve as the foundation of all project development. Our registered professionals provide a full range of surveying services which include:

- GPS Surveys
- Topographic Surveys with Design Map Production
- Metes and Bounds Surveys
- Right-of-Way/Record/Easement Plat Preparation
- Utility Surveys
- Subsurface Utility Engineering including Utility Locating and Designating
- Construction Stakeout

Planning

JMT planners provide a full array of services including transportation planning, community and regional planning, travel forecasting, environmental analysis and documentation, and public outreach programs.

We work with communities on the small scale to instill a sense of place in town centers, and on the large scale to help them prepare for municipal growth through zoning and land development ordinances. Similarly, JMT provides support when agencies such as utilities companies plan for facility expansions. JMT emphasizes public involvement and meeting facilitation which assists in the consideration and understanding of alternatives toward mutually-beneficial solutions.

Design

Our multi-discipline JMT design team is comprised of professionally registered engineers, architects, landscape architects and environmental specialists that provide cost effective and sustainable solutions to our clients. This versatility gives our clients the advantage of knowing that JMT will support all facets of a project.

Program & Construction Management

JMT provides comprehensive services for program management, construction management and inspection, construction support services for scheduling and claims, and commissioning in all Market Areas. As an agent of the owner, JMT assumes a proactive stance to anticipate potential problems and develop solutions before the program is adversely affected, allowing the owner to maintain schedule, cost and quality.

Environmental & Sustainable Solutions

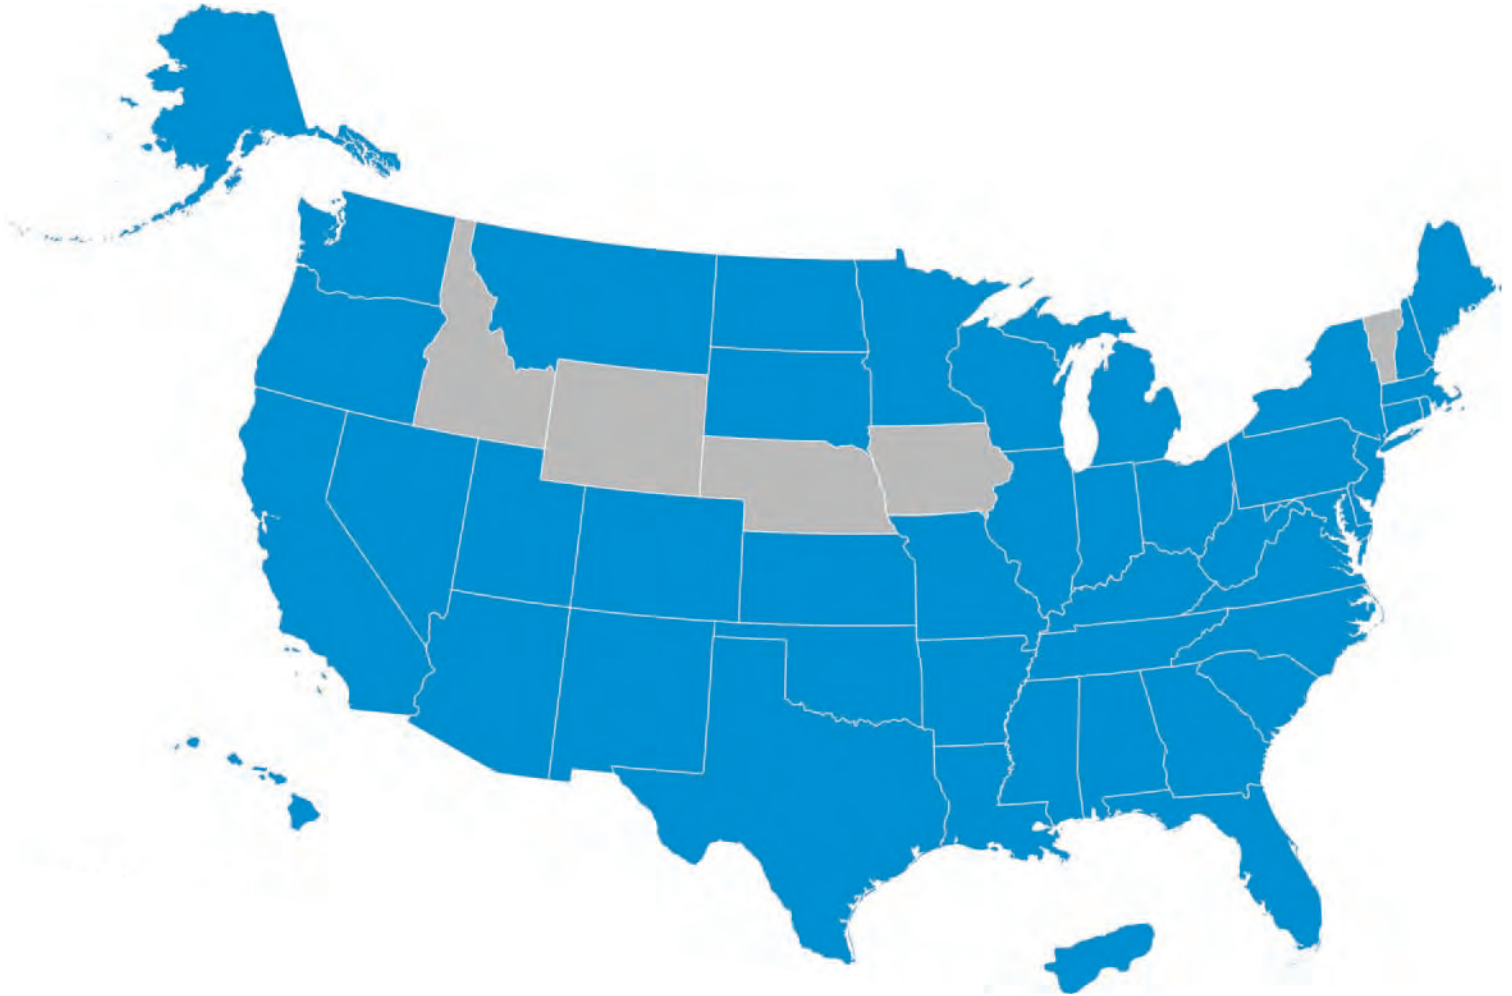

We offer a full complement of environmental services to protect our nation's natural resources. Our environmental scientists and LEED® Accredited Professionals develop sustainable solutions, prepare all environmental documentation, and ensure compliance with permit requirements. We provide environmentally sound and innovative green consulting, commissioning, and construction management services. Our professionals ensure that projects are constructed as designed and built to sustainable and green standards within schedule and budget requirements.

Innovative Project Delivery

At JMT we work with our Contractor and Client partners to deliver innovative and successful projects using Design-Build (One Step, Two Step, Competitive Sealed Proposals, and Best Value) and Public Private Partnership projects. The key to successfully delivering a project is the establishment of a strong working relationship with a contractor. We have leveraged our understanding of the project development process, and the environmental and permit process to eliminate project impediments while minimizing risk to all involved.

Where does JMT do Work?

We are proud of our track record of successful projects throughout the United States and its territories.
